

Feed feeding cutlery and mug

Feed feeding cutlery, special spoons and a dose mug are excellent aids for both adults and children who need a little extra support and help at meal-times. The cutlery is designed to facilitate feeding, and the dose mug makes it easy to drink.

Feeding cutlery

The feeding cutlery is made of plastic and has soft, rounded edges which feel pleasant in the mouth. This shape makes it easy to feed a person who has difficulties to open the mouth. The handle is designed so the assisting person can grip and give food comfortably, and its length means that the person being fed can also hold on to the cutlery.

Feeding cutlery

Dimensions: Feed spoon: 22 cm
Feed spoon, small: 20 cm
Feed fork: 22 cm

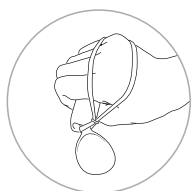

Material: Thermoplastic polyester

Weight: Feed spoon: 37 g
Feed spoon, small: 31 g
Feed fork: 34 g

Care: Dishwasher-safe

Design: Ergonomidesign

Feed spoon	8040 3101
Feed spoon, small	8040 3102
Feed fork	8040 3103

Spoons, angled and adjustable

When children want to eat by themselves

The adjustable, angled spoon is available for both right-handed and left-handed children. The head of the spoon is infinitely adjustable, and the handle has a combined "support and stop peg". This allows the child to hold the spoon close to the head: the peg is supported on the plate and prevents the child's hand from dropping into the food. The strap is useful for children with poor gripping ability.

Weight: 40 g
Care: Dishwasher-safe
Design: Ergonomidesign

Dose mug

The dose mug is designed for people who need help with drinking. The spout shape allows the user to drink without leaning his or her head back. This mug also provides good contact with the lips so pouring feels more secure. This mug comes with 1/2 dl and 1 dl markings.
