

Food preparation aids

To be able to make a sandwich or beat up some eggs for an omelette when you are hungry is a part of our daily life routines. Our kitchen products enable persons with impaired strength and mobility or with one hand function to do simple food preparation.

Cut stands firmly and simplifies cutting

The Cut is a functional cutting aid which simplifies kitchen work by standing firmly and holding in place whatever is to be cut.

By turning the transverse lath, the thickness of the slices is easily changed. The knife fits in the guides, so users with tremor or impaired sight can cut straight – and safely.

Cut cutting aid 8050 1005

Material: Polystyrene
Weight: 415 g
Design: Ergonomidesign
Care: Dishwasher-safe

Relieve cheese slicer

This cheese slicer allows people with impaired strength in their hands to slice cheese. The handle has rounded edges and a supporting edge for the thumb, and it is close to the slicing blade so that less force has to be used. The slicing blade is “wavy” so that the cheese comes free of the blade with ease.

Description Item no.
Relieve cheese slicer 8050 2001

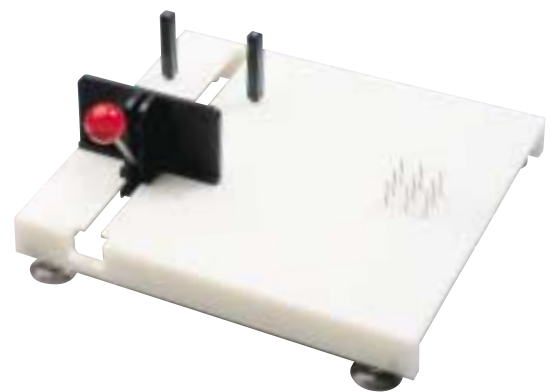

Material: Handle: Polypropylene
Cutter: Stainless steel
Weight: 69 g
Care: Dishwasher-safe
Design: Ergonomidesign

The Relieve cheese slicer is particularly suitable for people suffering from rheumatism, as the handle permits a stable and an ergonomically correct grip.

Fix simplifies household chores

Fix preparation board is a useful aid for anyone who has problems carrying out certain tasks using one hand only, or for anyone whose hands are weak.

The jaws can be used to hold a bowl, grater or piece of food in place with ease. There is a spiked plate for smaller pieces of food. This can be removed and also placed with the spikes pointing downwards when you need a flat surface.
