

## Swift shower chair/stool

Swift is a prize winning range of shower stools and shower chairs based on functionality and simplicity. Swift can be all from a simple shower stool to a complete shower chair, depending on the user needs. These products come flat-packed and are easy to assemble without tools.

## Swift - stable on any floor

The Swift is of a sturdy plastic and aluminium design that adapts itself to uneven floors. In the shower, where the floor slopes towards the drain, the Swift stands firmly on all four legs thanks to its built-in flexibility. The soft ferrules adapt themselves to the floor and ensure a good grip. The anti-slip pattern on the seat provides safety and stability – all important properties if the user is to feel secure.

## When circumstances change, Swift changes

The Swift is the shower chair that can be adapted to meet different needs. It is based on a modular concept. Swift can be ordered as a simple stool, a stool with armrests or a complete shower chair. The stool can easily be completed with armrests or a backrest depending on the users needs and how these needs change. The oval telescopic legs ensure the height can be easily adjusted by hand.

Swift is easy to clean and does not rust. It can handle temperatures up to 85 °C.

The flat-packed Swift is easy to handle at storage, when doing house calls or going on holiday.

Swift stands firm and adapts to uneven floor surfaces.
