

## Cloo – function and flexibility in one product

Cloo is our new adjustable toilet seat raiser which combines flexibility and simplicity. It has a discreet and soft design to blend in with your bathroom interior.

To make your choice simple, Cloo is only available in two different models, with or without armrest. However both models can be adjusted to different heights and with an angled seat. The flip-up armrests are detachable and can also be fixed in place when extra stability is required. Should you purchase a Cloo without armrests, you can always add armrests at a later date.

A toilet seat raiser must also be easy to clean. Cloo therefore has smooth surfaces and the seat can either flip up or be removed for easy access.

Quite simply, Cloo is a modern safe and hygienic toilet seat raiser.

## Easy to mount

Cloo consists of an attachment and a seat. The attachment is easy to mount on the porcelain using quick-release nuts. Then the seat simply clicks into the attachment. If the toilet is placed in a corner with lack of space, one of the armrests can easily be detached. No tools are required.

## Easy to adjust seat height and angle

Cloo can be adjusted to give a seat height of 6, 10 or 14 cm (2¼, 4 or 5½") seat height. To achieve the highest position, extra heightening spacers are available as an accessory. The seat can also be angled to be 4 cm (1½") lower at the front. This can be helpful for users who have problems with their hip joints. Both the height and angle can always be readjusted according to the needs, without the use of any tools.

## Easy to clean

Cloo has soft plain surfaces, which makes it easier to clean. The seat can easily be detached by lifting it straight up. Another option is to flip the seat up. Cloo is the first adjustable toilet seat raiser which stays in the upright position.

## Stable and comfortable

The seat is designed to offer a relaxing support. The stable armrests are comfortable to grip. They can also be fixed in the folded position, which provides increased stability and minimises the risk of trapping a leg when folding the armrests down.
